

Six representative plans of the Greek temple: (a) a temple in *antis*, in which the portico is formed by the projecting side walls of the *naos* with two columns set between their ends (*antae*); (b) Temple B at Selinus, Sicily, a *prostyle* temple, in which the columns stand in front of the *naos* and extend to its width; (c) Temple of Athena Nike on the Acropolis at Athens, an *amphiprostyle* temple, in which the *prostyle* plan has a porch added at the rear; (d) Temple of Hera at Olympia and (e) Temple of Aphaia at Aegina, *peripteral* temples, in which a single colonnade surrounds the *naos*; and (f) Temple of Apollo at Didyma, near Miletus, a *dipteral* temple, in which two colonnades surround the *naos*. (Drawings are not to scale.)
